

➤ Facade signage

Interacting with architecture
and the environment

Illuminated sign with film-covered acrylic front

Encased brass lettering with inner lighting

30 mm lettering in brushed stainless steel

Aluminium logo and text with built-in LED lighting

Logo texts for facade signage – with or without light source in the form of neon tubes or LEDs.

The signs are designed to project light or as closed encased lettering where the light is projected back against the wall to create a ring of light around each letter.

DanSign also mills texts in all materials for direct mounting onto walls or façades using concealed fittings.

Examples of materials are: Brass, brushed steel, high gloss finished steel, aluminium, acrylics and wood.
