➔ Monoliths

Interacting with architecture
and the environment

Inner lit wayfinder monolith with changable overview plan.

Staff parking monoliths at Copenhagen Airport. Material: Stainless steel. Text and arrow feature milled front, which shine in the dark.

Mini CurveSign monolith in lacquered aluminum.

Monoliths are made of aluminium, steel and glass and designed to harmonise with existing signage and the building as a whole.

Graphics and choice of colour match design manuals and the surrounding environment.

Lighting can be incorporated into the monoliths so that logos shine in the dark. Monoliths can also be partially or wholly illuminated using ground-mounted spot lamps.

Working closely with the client, our graphic designers draft sketches and proposals prior to production.
