

## ➔ Novicom

A multi-purpose digital  
information system

# Dan.Sig

## Design

LCD monitors with dynamic display built into specially designed free-standing kiosks or wall-mounted boards with glass fronts, which, thanks to the free choice of colour and wide range of materials, harmonise perfectly with the company's corporate look.

## Operation

The system can be operated at various user levels from any PC in the organisation. A personal password gives access to the user level authorised. This ensures relevance and uniformity in the system's use and displays.

The system is simple and user friendly. Once meetings and other activities have been entered in the system, messages and changes will be updated and displayed instantly.

For experienced users, the system gives plenty of opportunity for adding special effects on important days or for advertising purposes, etc.

Digital information board providing information on meeting room use at Dorint Sofitel, Amsterdam Airport

## The Novicom series includes:

- » info kiosks, wall-mounted and suspended information boards.
- » Built-in LCD monitor sized 15" and upwards.
- » Information system for managing meeting room bookings, special functions and events.
- » Display welcoming visitors and providing floor plans and instructions.
- » Slide show presentations for company promotions, advertising, entertainment, etc.
- » Information on prices, exchange rates and share prices.
- » News items direct from the Internet.

### Interface

The digital information board is capable of retrieving information automatically from various databases and is compatible with MS Outlook, MS Exchange, MicrosFidelio, Techhotel and Lotus Notes among others. News and updates are continually added.

### Installation

The system is installed on a local server (LAN) or via the Internet. Monitors can be mounted on walls, built into walls or fitted to pylons. Please contact us for further information.

Digital signs with internal promotion and meeting room overview.
