

## ➔ Tactile Signage

Signs for the blind and visually impaired

Dan Sign

Tactile signage consists of raised text/pictograms with corresponding braille translations. Braille and raised copy/pictograms can be implemented on all of DanSign's sign systems.

DanSign is a market leader in the use of tactile signage in both Europe and the US. Our experts are well versed in the codes and regulations associated with tactile signage.

At DanSign we use the most current technology, software and resources to ensure that our tactile signage is accurate, and is of the highest quality.
