

## ➔ Digital Signage

Dynamic Signage  
for a Professional Environment

Dan Sign

CosmoSign is a dynamic signage system with narrow TFT screens, which can be built into any of DanSign's architectural wall mounted sign or pylon signage systems. It ensures a harmonic and homogenous signage solution consisting of both static and electronic signs, matching the building's identity and environment.

With a CosmoSign company visitors are met with an accommodating message and impression from the moment they enter the door. Guests can see their names and company logos on welcoming signs and signs outside board rooms sending a highly professional signal with a personal touch.

The screen's flexibility makes it easy to list an overview of meetings and other activities of the day. Adjustments can be made by the click of a button and sent to each individual sign, always keeping guests and employees up to date.

The built-in wayfinding software allows you to guide visitors to the right in-house destination in an easy and efficient manner.

Movie clips and news tickers can run on the screens alongside or independently of other information.

CosmoSign can be operated from any PC and at any user level in the organization. A personal password authorizes access to a particular user level. All users utilize similar templates giving relevance and uniformity in usage and in screen presentations.

The system is controlled by the software package included. It is compatible with most companies' existing systems such as MS Outlook, Lotus Notes, MicrosFidelio, etc. Using such standard booking applications in programming the signs additional staff training is therefore not required.
